### **Description**

Vibia Flamingo 1515 emits direct and indirect light. The light source is located in a lamp head below the two conical shades. The translucent shades let a part of the light go through and also reflect a part of the light into the room. A cable is integrated into the lamp head, with which the pendant light can be connected independently of the current outlet. The lamp head also carries a cable from which a counterweight hangs approximately 2 cm above the floor. The lamp head, the counter-weight as well as the canopy are available in gold satin matt, white matt lacquered, graphite-grey matt lacquered and copper glossy. The pendant lamp can be adjusted in height by shortening the cables if required.

A dimmer is integrated on the supply cable with which the light is dimmed and switched. The light is switched on and off by pressing the switch quickly, and a longer press sets the light intensity. There is also available the same lamp as with a direct ceiling connection.
