Jahreszeiten Eiszeit Pendant Lamp

Durchmesser in cm

- 70
- 50
- 90

Oberfläche

- brown
- gold
- silver
- white

Technical details

Country of Manufacture	 Germany
Manufacturer	Anthologie Quartett
Designer	Michael Topor
Year of design	2003
Protection class / IP rating	IP20
Contents of the package	Leuchtmittel und Kerzen/Bulb and candles
material	crystal glass, Iron
dimming	dimmable on site
Base / Socket	B15d
system performance	10 x 40 Watt (max.)

Description

The Anthologie Quartett Jahreszeiten Eiszeit Pendant Lamp (Seasons Ice Age Pendant Lamp) is a chandelier with a combination of real candles and electric lamps. This Jahreszeiten lamp has large, hand-cut crystal glasses as a design element. The metal structure made of iron is available in bronze brown, gold, silver or white surfaces. A chrome finish is also offered on request. At the end of the supplied canopy there is a 10 cm long S-hook. A 40 cm long S-hook is hooked into this to suspend the lamp from the ceiling. The suspension cannot be shortened by the user. Other lengths for the included 40 cm long S-hook are available on request.

The Jahreszeiten Eiszeit pendant light is offered in three sizes: with a diameter of 50 cm, 70 cm or 90 cm. The diameter of each lamp is approx. 50 cm, 70 cm or 90 cm. Depending on the size, the crystal glasses are distributed in different arrangements on the metal structure.

In the 18th century, the Montgolfier brothers caused a sensation with the first flight in a hot air balloon. This is how lamps with a semicircular shape in the lower segment were created at that time. The chandelier series Jahreszeiten is inspired by this Montgolfier style, so that the chandelier got its bulbous shape in its lower third. The symmetrical arrangement of the electric arms and forged candle holders give the lamp a modern design language. From the collection, further chandeliers with different crystal sizes and partly with different foliage made of patinated brass are offered.

Note: The use of retrofit sockets (B15d) allows the use of state-of-the-art light sources in the future (halogen lamp, LED). In terms of sustainability, the lamp can therefore continue to radiate its light for many years to come.
