Description

The Vibia Set 7750 is a single-lamp LED wall light with a diffuser made of borosilicate glass. At the bottom of the lamp a 9 watt LED is housed, which radiates its light upwards. The top of the Set 7750 is rotated 360°. So the light of the lower part can always derive differently and there a play of light and shadow is generated.

The Set 7750 was designed by Xuclà and it is available by Vibia in the surfaces in white matt and mink matt. The wall lamp is on site dimmable with 0-10 Volt. As standard, this lamp has a colour temperature of 2,700 Kelvin extra warm white; on request, it is also available with 3,000 Kelvin warm white or 4,000 Kelvin white. As a single lamp it can be use due to its small size and its simple design virtually anywhere. The lamp can also be used in combination with other Set lights.
