### Description

The house numbers Iron Number 240 from Keilbach is made of weatherproof, corroded steel, which is already covered from the factory with an unusual patina of patina. This will continue to develop individually at your home. The house number measures 24 cm in height with a material thickness of approx. 2 mm. It is fixed with spacer rings at a distance from the wall.

The selection of the correct font is very important when designing a house number, because a house number should be optimally readable. In addition, each house number is an important design element on the house wall. The font "Eurostile" is used for the Iron Number. This was already designed in 1962 by the well-known Italian typographer Aldo Novarese.

The numbers 0 to 9 and the letters a to d are available. When ordering, please enter the desired combination of numbers and letters in the " Comments " field.
