Omschrijving

With the Mawa Wittenberg 4.0 lens unit, the beam angle of a Wittenberg 4.0 lamp can be easily changed. The lens unit can be replaced either by hand or with a vacuum cup by turning it 45° counterclockwise.

The Wittenberg 4.0 lens unit is offered with a beam angle of 12, 24 or 38 degrees. With a larger beam angle, the light is distributed over a larger area. With a beam angle of 12 or 24 degrees the light cone becomes narrower, with a beam angle of 38 degrees it becomes wider. This accessories can be used for all Wittenberg 4.0 lamps.
